Respiratory Illness Symptom Screening Tool for Parents and Caregivers

Parents and caregivers should use the following questionnaire to assess the health status of their child on a daily basis.

Does your child have:

1. Fever (100°F or 37.8°C or higher)? □ Yes □ No
2. Sore throat? □ Yes □ No
3. Cough? □ Yes □ No
4. Nasal congestion? □ Yes □ No
5. Runny nose? □ Yes □ No

SHOULD I KEEP MY CHILD HOME?

- If you checked “Yes” to fever AND one of the other symptoms, **keep your child home for at least 10 days after their symptoms began.**
  - If they still have cough and fever after 10 days, continue to keep them home until 3 days (72 hours) after their fever has gone away (without using a fever-reducing medication like Tylenol or ibuprofen) AND your symptoms like cough, body aches or sore throat have improved.

- If your child has been diagnosed by a healthcare provider with a different disease, such as strep, follow your healthcare provider’s recommendation and school policy for when to return to school.

WHAT SHOULD I TELL MY CHILD’S SCHOOL?

- If you checked “Yes” to fever AND one of the other symptoms, tell your child’s attendance office that your child is home with a respiratory (influenza-like) illness.

- If your child has been diagnosed by a healthcare provider with a different disease, such as strep, tell your child's attendance office.
